Social and detail-oriented software designer

As a software designer newly graduated from IT University, I am able to design, develop and test digital solutions. I can use my experience within the art and design field together with my knowledge of software development to create contemporary user-facing software that users delight in. Throughout my studies I have gained experience with interdisciplinary group work and acquired project and time management skills, while my work experience at the University of Copenhagen has sharpened my communicative skills.

Education

2019-2022   MSc in Software Design - Technical Interaction Design, IT University

I studied Software Design specializing in Technical Interaction Design. I wrote my thesis on personalized learning. In addition to skills in software development and maintenance - from analysis, design, development, testing and launch, my specialization has given me a thorough understanding of user-oriented software development.

- Frontend development from idea to development
- JavaScript
- HTML, CSS
- React
- Figma
- Version control (Git)
- Information security
- Java
- SQL
- Agile methods

2016-2019   BSc in Art History, University of Copenhagen

I chose to study Art History based on my interest in aesthetics and design. My bachelor has given me a humanistic mind-set and an understanding of culture, history, philosophy and ethics, which I believe is a fundamental knowledge when creating great software that target all sorts of people. Throughout my bachelor I developed my aesthetic sense and gained an extensive experience in academic writing and research. The elective, Digital Design, gave me the opportunity to merge my interests in the art of design with the art of programming.

Work experience

2021   **Freelance frontend developer, ÅBEN**

- In close collaboration with the graphic designer at ÅBEN I have developed an e-commerce page connected to Ticketmaster.
- The page was developed in HTML, CSS and JavaScript
- My responsibilities include development and maintenance.

2019   **Student assistant in the News team, University of Copenhagen**

- Development and maintenance of intranet and web portal
- Preparation of newsletters for alumni
- Registration and extraction of data
- Various ad hoc tasks

IT   ## Language

IT			Language	
JavaScript	★★★☆☆		Danish	★★★★★

Java	★★★☆☆			
SQL	★★★☆☆			
Git	★★★★★			

About me

In my spare time I spend time developing websites for my friends and acquaintances (primarily in the design industry). In addition, I play on the football team named *Provinsen Piger* (The Girls of the Province), which is located at Kløvermarken, Amager. In the summer I enjoy sailing in Jutland with my family.
